

# Senior Automation QA - SDK

- **Duration:** 4320 minutes
- **Tools:**
  - **web automation web Playwright is preferred**
  - **Mobile automation appium is preferred or candidate's choice**
- **Languages:** Typescript preferred or (candidate's choice)
- **External Resources:** Allowed (Google, Stack Overflow, AI tools, documentation)

## Problem Statement: Simple automation iFrame

You've been tasked to create an automation for iFrame and validation between frontend, API, and mobile app. The automation needs to validate the button function and compare results between API response and frontend.

Web URL: <https://v4.sdk.tyrads.com/?token=xxx>

The token will be attached along with the email. The token is only valid for 7 days.

APK: you may find the apk on the repository.

apiKey: 0a55de10c58f459c9f65988d9d33e774

apiSecret:

418fc08c18a6715b48428568946e6f82f0ff06bfbc017944d22a19b3317a5ce2ad7028b0599a1  
49534d957017d54650a9fa355cebf6971d7fdb3eca372ca4ed

encryptionKey: VKdZsSz9&3WQqA6xfBJ4G2!5cUe8Y7yP

After completion, you can push your automation testing code and screen record when the automation mobile and web is running to the Github Repo.
